Legacy Data Archival

Enhancing patient care with seamless access to legacy data anytime, anywhere...made achievable.

Sustaining outdated legacy systems is neither readily accessible, secure, nor cost-effective. The path to achieving improved patient care begins by embracing a modern healthcare legacy data solution, without draining the IT budget.

The Keystone Technologies solution powered by CareFinity is a fraction of the cost, providing:

Accessibility
Support better continuity of care and Release of Information with streamlined workflows and easy access to patient EHR data from any device anytime, anywhere.

Security
Build a robust archive with read-only access to patient data from inactive EHR systems and AWS global security resiliency.

Cost Efficiency
Reduce EHR licensing by leveraging Amazon –supporting virtually unlimited scalability with industry-leading data security and resiliency.

Built Specifically for Healthcare Accessibility

Legacy systems are the backbone of healthcare organizations, providing essential patient data directly influencing the quality of patient care. The **Keystone Technologies' intuitive solution powered by CareFinity** offers an intuitive, scalable cloud solution.

Purpose-built for healthcare organizations, the infrastructure supports a fully redundant architecture that caters to computing, storage, and security needs while complying with HIPAA and HITECH regulations. And it doesn't break the bank like most systems. **Our solution is a fraction of the cost, ask us how!**

We make retiring legacy systems hassle-free

Retiring data is not one size fits all. Our team works closely with healthcare organizations of all sizes. We understand the importance of listening, creating tailored solutions, intricate data landscapes, and the importance of staying nimble. That's Keystone Technologies' way of creating a transparent partnership. When you're ready to archive legacy healthcare data, there are specific considerations you'll need to make depending on whether you're retiring a mainframe, EHR or revenue cycle management system and we guide you at every step.

Our team will make the entire process hassle-free. Discover the impact that healthcare data archiving could make for your organization.

72%
C-suites say their outdated legacy platforms hold them back

Accessing archived data is possible via a link in your new EHR or any web browser.

Intuitive and Easy to Use

The simple design allows users to access the patient data they need, when and where they need it with a minimum amount of training. Designed to be smarter, faster, and easier!

Financial Summary

Integration with Current EHR Systems

- Archive and view data from legacy systems
- Defray cost of data conversions
- Access archived clinical and billing information
- View data on your desktop, laptop, or mobile
- Centralized access to multiple legacy systems
- View all documents and images
- Print and export records for Release of Information
- Access data from multiple locations
- Audit logs of user access
- Multi-factor Authentication
- Supports SSO and can be embedded into your production EHR

Keystone Technologies partners with Med Tech Solutions to deliver CareFinity EHR Archive.

Integration with Current EHR Systems

Secure integrations are made easy when migrating to a new EHR system, merging with another group, sunsetting an older EHR system, or when **long term access without the full cost of EHR support and maintenance is needed.**

Supporting full functionality to work with archived charts and meet regulatory needs including printing and exporting for Release of Information, user access tracking, and patient search capabilities.

About Keystone Technologies

Keystone Technologies stands at the forefront of healthcare technology, dedicated to ensuring healthcare providers possess timely and accurate information to offer top-tier patient care. Our legacy is built upon delivering effective solutions with optimal technology.

Optimize costs and refocus on what truly matters – your patients.
